

Blue+ 16/4 ISA

"Industry leading performance"

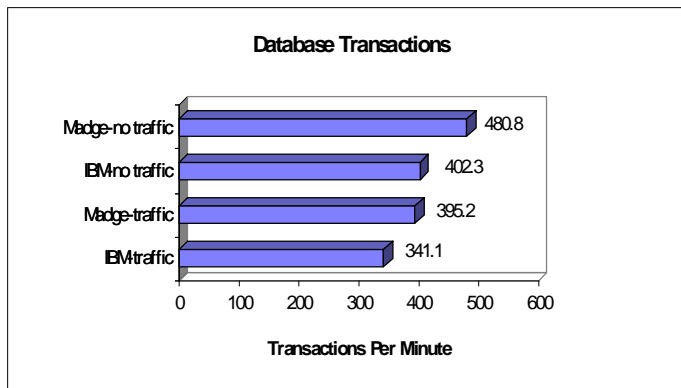

Source: The Tolly Group, May 1995

"Throughput improves most dramatically in NetWare environments, where the Blue+ achieved performance increases up to 90% over the IBM adapter running IBM drivers."

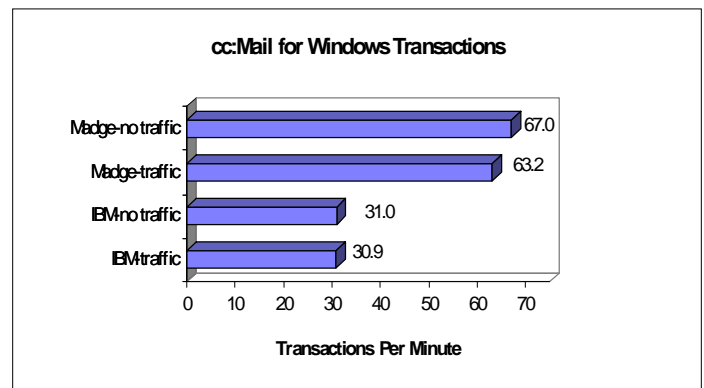

Source: NSTL, May 1995

"The Madge Blue+ 16/4 ISA adapter outperforms the IBM Auto 16/4 ISA even when the Madge adapter is running with traffic and the IBM adapter is not."

Source: NSTL, May 1995

"The Madge Blue+ outperforms the IBM Auto 16/4 ISA by approximately 15%."

Source: NSTL, May 1995
cc:Mail for Windows Transactions with small attached file

"For the more common smaller attachments the difference is even more pronounced as the Madge Blue+ adapter performs twice as many transactions as the IBM Auto 16/4 ISA adapter."

Blue+ 16/4 ISA

"Iron-clad 100% IBM compatibility"

***"The Tolly Group successfully tested three adapter/driver combinations of the Blue+ adapter and an IBM Auto 16/4 ISA adapter with both the Fast Blue drivers and IBM TROPIC drivers. All three combinations of adapter and driver operated in the same manner as the baseline (i.e., IBM adapter with IBM drivers) in all scenarios tested."
*(see compatibility results opposite)***

"The Madge Blue+ 16/4 adapter and Fast Blue software went through the rigorous Token Ring interoperability test suite at TRIL (Technical Resources Interoperability Lab) and gained our certification."

"The Madge Blue+ 16/4 Token Ring adapter is designed to operate with both Madge and IBM NDIS drivers. Both drivers ran the network stress and Server NDIS application tests flawlessly."

Applications Compatibility Results
